

INDIA'S LOCAL SUPER-APP · KERALA-FIRST

Every service your city needs, on one platform.

Home repairs, movers, tutors, care, laundry, rides, courier and carpool — dispatched from one shared network of local providers. Built fair to the pro, WhatsApp-first, and made to scale from Kerala outward.

THE OPPORTUNITY

A ₹5,000B market that no app has organised.

India's home & local-services market is enormous and almost entirely informal. Online platforms touch a sliver of it — and they've concentrated in a few metros, leaving Kerala's cities and towns wide open.

~90%

of the services market is unorganised — no platform, no receipts, no ratings

<1%

of service transactions happen online today

~35%

of new platform users now come from Tier-2/3 towns — where WeAid starts

The incumbents left a gap

Urban Company charges pros ~28% + forced kit purchases, hides the pro behind the app, and covers only 2 Kerala cities. JustDial/Sulekha sell the same lead to 8 businesses. Customers rate both ~1.4/5.

The new money won't come here

Snabbitt / Pronto chase metro chores; Rapido/Ola fight ₹40 bike rides. None serve Kerala's high-trust, high-ticket work — repairs, movers, elder care — where relationships and reliability win.

The wedge: win a city with the trust-heavy verticals first, then use that live provider network to launch rides, courier and food — instead of buying supply from zero.

THE PRODUCT

One app. Nine verticals. One shared network.

WeAid isn't nine apps — it's one dispatch platform where every service is a "mode." ~70% of every vertical (location, matching, payments, comms, ratings) is shared, so each new vertical is mostly configuration.

 Home Services Electrical, plumbing, AC, cleaning, CCTV...	LIVE	 Packers & Movers High-ticket shifting	LIVE
 Home Tutors Browse & contact	LIVE	 Nurses & Elder Care NRI / Gulf-family angle	LIVE
 Laundry Pickup & deliver	LIVE	 Rides / Taxi Pickup→drop, fare, live-track	BUILT
 Courier / Parcel Handover token (OTP)	BUILT	 Carpool Post a ride, split cost	BUILT
 Food Delivery Menu → order → driver	NEXT	 Home Food Home chefs & tiffin	NEXT

HOW IT WORKS

Four reusable flows cover everything.

Instead of building nine products, WeAid builds four flows. Every vertical is one of them — and every one runs on the same drivers, payments, masking and comms.

Directory

search → contact

Find a pro, reach them directly. Tutors, care.

Book

price → dispatch → done

Fixed price, nearest pro accepts. Repairs, movers.

Trip

pickup → drop → track

Per-km fare, live map, token. Rides, courier.

Catalog

menu → order → trip

Order, a driver delivers. Food, home food.

For customers

Pick a service + location → see an upfront price → nearest verified pro accepts → pay in-app → confirmation call + WhatsApp updates → rate.
Numbers are masked; contact stays on-platform.

For providers

Free to join, keep 82–92% of every job, get pinged nearest-first, one dashboard for jobs + trips. No lead packs, no forced kits, no penalties.

The super-app advantage: one fleet of drivers does rides, courier *and* food delivery. One provider network powers repairs, movers, care and laundry. Every vertical makes the others cheaper to run.

Five revenue lines, one platform.

WeAid earns when providers earn — never before. Free signup grows supply; monetisation scales with activity and trust.

Commission

A cut of every job / ride paid in-app. The core, scalable line.

8–20%**Featured placement**

Pros pay to sit at the front of search. Pure margin, no payment routing.

₹499/mo**Per-job lead fee**

Small charge when a pro accepts a job — survives cash payments.

per lead**Trip fare cut**

Commission on rides & courier fares; platform fee on carpool seats.

15–20%**Big-job & AMC**

Sales-agent quotes on large jobs; annual maintenance contracts (NRI angle).

recurring

Illustrative unit economics: a ₹600 repair at 15% = ₹90 revenue; a masked confirmation call costs ~₹5. Margins are software-margins — the field work is the provider's, not ours.

The advantages compound.

Fair to the pro

8–20% vs Urban Company's ~28% + kits. This is the supply magnet — and supply is the whole game in a marketplace.

WhatsApp-first

Customers reach a real person the way Kerala already behaves. Incumbents hide the pro or spam the customer.

One shared spine

Every new vertical reuses location, dispatch, payments, masking, drivers. Competitors run one vertical each; WeAid compounds.

Hyperlocal moat

Win Thrissur, Kottayam, Kannur — where Urban Company isn't and Rapido won't come. Malayalam, local trust, local pros.

Trust built in

Verified pros, verified-job reviews, number masking, re-do guarantee, AI confirmation calls on both ends.

Dual demand

Browse-and-contact (free, JustDial-style) tops the funnel; book-with-guarantee converts it to commission revenue.

This is a working product, not a pitch.

The platform is built and deployed on weaid.in. The spine and five verticals are live; rides, courier and carpool are built and ready to switch on.

- ✓ Provider directory: signup, search, ranking, profiles, reviews
- ✓ Nearest-first GPS dispatch + live availability map
- ✓ Scheduling: now / later / urgent, multi-person crews
- ✓ Carpool: post a ride, join & split the cost
- ✓ Number masking (privacy) on booked jobs & trips
- ✓ Featured placement, per-job leads, big-job sales-quote
- ✓ Uber-style booking: upfront price, dispatch, first-accept-wins
- ✓ Provider dashboard: jobs, trips, earnings, availability
- ✓ Rides + Courier: fare engine, live-track, handover tokens
- ✓ Payments: Stripe + Razorpay + UPI, commission split
- ✓ WhatsApp updates + AI confirmation calls (Sarvam, Malayalam)
- ✓ PWA — installable as an app today; API-first for native later

Capital-efficient: built lean on Next.js + Supabase + Vercel with AI-assisted development. The expensive parts of a super-app — real-time infra, a native driver app, city ops — are scoped as funded phases, not sunk cost.

ROADMAP

Kerala first. Then the country.

Prove the model in one state where liveness, regulation and liquidity are all manageable — then replicate the playbook city by city.

DONE Now	Spine + 5 service verticals live Directory, booking, dispatch, payments, masking, comms. Home services, movers, tutors, care, laundry.
BUILT Launch	Rides, Courier & Carpool — Kerala Pickup→drop fares, live-track, handover tokens. Onboard first drivers; polling-based tracking at local scale.
NEXT Phase 3	Food Delivery + Home Food Restaurant & home-chef menus; the delivery leg reuses the courier fleet.
SCALE Phase 4	National infrastructure Real-time GPS at scale, native driver app, city-by-city launch playbook, ops & trust teams.

THE VISION

The **everything app** for India's towns — starting where the giants aren't.

One trusted network. Every local service. Fair to the people who do the work. WeAid turns Kerala's 90%-informal service economy into an organised, on-demand platform — and builds the template for every city like it.

weaid.in · Let's build the network.
